IWAKI MAGNETIC DRIVE PUMPS

MX

Solutions for chemical handling applications
Even better dry-running resistance and efficiency than previous models. Iwaki MX magnetic drive pumps - reliable & energy efficient.

The MX Series represents the latest state of the art design in plastic magnetic drive pumps to meet the most severe of operating conditions. When fitted with a carbon bearing the MX will allow for brief periods of dry running. The new “self radiating structure” (PAT.) in addition to the existing proven non contact principle and front and rear supported spindle greatly improves the pumps ability to withstand some cavitation and running against closed discharge valve. Our innovative design has achieved higher efficiency. MX series pumps are highly recommended for use in various production processes such as filtering, spraying, washing and etching in surface treatment processes.

• An improved mechanical strength design allows operation under abnormal conditions and results in reduction of running cost and maintenance cost.
• The split-volute casing significantly improves efficiency over previous versions.
• Simple yet robust construction allows easy maintenance.
**Self-radiating structure** (PAT.)

Through heat-dispersion holes provided in the fixed portions of the impeller and the magnet capsule, the liquid around the spindle and the bearing is forced to circulate so that heat generated by sliding can be reduced effectively. Thus, thermal deformation and melt are prevented.

(Except MX-70, 100)

**Non-contact structure**

By installing the driving magnet and the driven magnet in an inventive way, the movement of the magnet capsule is controlled by magnetic force to prevent the rear thrust and the rear portion of the bearing coming into contact with each other continuously even during dry running. This structure reduces heat generation and secures lubricant routes.

(Except MX-70, 100)

**Volute casing divided into two sections** (PAT.)

The MX series is the first resin magnet pump which uses the pump casing divided into the front casing and the rear casing to form a vortex chamber as an ideal form. Therefore, the internal leak phenomenon, which means that the liquid getting out of the impeller returns to the pump casing and is suppressed to a minimum and the liquid is efficiently guided to the discharge port to enhance overall efficiency.

(Except MX-70/400/505)

**Robust structure**

All stress bearing portions, such as the front and rear casings, are reinforced by means of ribs to improve the pressure resistance and the mechanical strength of the pump.

The bearing is not only fixed by conventional press fit but is also sandwiched between the abutting portion in the depth of the magnet capsule and the rear end of the impeller to improve its reliability under high temperature.

(Except MX-70, 100)

MX-402(H), 403(H) and 505 models: an unplugging preventive lock pin is adopted for ensuring more steady securing.

## Pump identification

**MX-70 and 100**

- **Pump size**
  - 70: G1 x G1 150W
  - 100: G1 x G1 260W

- **Series symbol**
  - MX: Material of Casing/GFRPP

**MX-250 to 403H**

- **Pump size**
  - 250: G1 x G1 0.37kW
  - 251: G1 x G1 0.75kW
  - 400: G1 x G1 0.37kW
  - 401: G1 x G1 0.75kW
  - 402: G2 x G1 1/2 1.5kW
  - 403: G2 x G1 1/2 2.2kW
  - 505: 65A x 50A 4.0kW

- **Series symbol**
  - MX: Material of Casing/GFRPP

**Note:** Applicable models are MX-250/251, 400 & 401.

## Specifications

### Common specifications

- Range of liquid temperature: 0 to 80°C (10 to 80°C in case AFLAS® O-rings are used.)
- Range of ambient temperature: 0 to 40°C

### Notes:

- **Note 1:** The specific gravity limit varies with the discharge. For details, please contact us.
- **Note 2:** 26mm tube connection option available on the MX-70 and MX-100.
- **Note 3:** AV(AE) type is different in discharge capacity. For details, please contact us.
- **Note 4:** Less motor except MX-70 and 100.

## Optional accessories

### Iwaki pump protector DRN series

**Detected unusual pump operating conditions including dry-running and overload**

The DRN model protects equipment (including pumps) from damage!

Minimizes production downtime.

Identifies possible causes of alarms so they can be investigated and addressed.

IWAKI MAGNETIC DRIVE PUMPS

Iwaki process magnetic drive pump series

**MX-F series**
Withstands difficult operating conditions and offers high efficiency

Max. discharge capacity: 510 L/min  
Max. discharge head: 30 m  
Main materials: CFRETFE

**SMX series**
Versatile self-priming magnetic drive pump with enhanced durability under abnormal operation

Max. discharge capacity: 440 L/min  
Max. head: 25.5 m  
Main materials: GFRPP, CFRETFE

**MXM series**
Magnetic drive pumps with an excellent balance of features and performance

Max. discharge capacity: 600 L/min  
Max. head: 29 m  
Main materials: CFRETFE

**MDM series**
Magnetic drive processing pump with dry running capability

Max. discharge capacity: 1.4 m³/min  
Max. head: 74 m  
Main materials: CFRETFE, PFA

Caution for safety use:

⚠️ Before use of pump, read instruction manual carefully to use the product correctly.

⚠️ Legal attention related to export.

Actual pumps may differ from the photos. Specifications and dimensions are subject to change without prior notice. For further details please contact us.

Our products and/or parts of products fall in the category of goods contained in control list of international regime for export control. Please be reminded that export license could be required when products are exported due to export control regulations of countries.

The posting and copying from this catalogue without permission is not accepted.
